

Tier IV Data Centre

Supporting Your Digital Growth in Vietnam

KT's new data centre in Vietnam is a globally recognised Tier III commercial data centre with the capability to be customised to Tier IV in order to meet specific business requirements. Situated in the Saigon High-tech Park, just 11km from the heart of Ho Chi Minh City, the area is known for its concentration of IT and high-tech enterprises. The data centre is slated to be fully operational in Q1 2026, and available for reservations beginning in 2024.

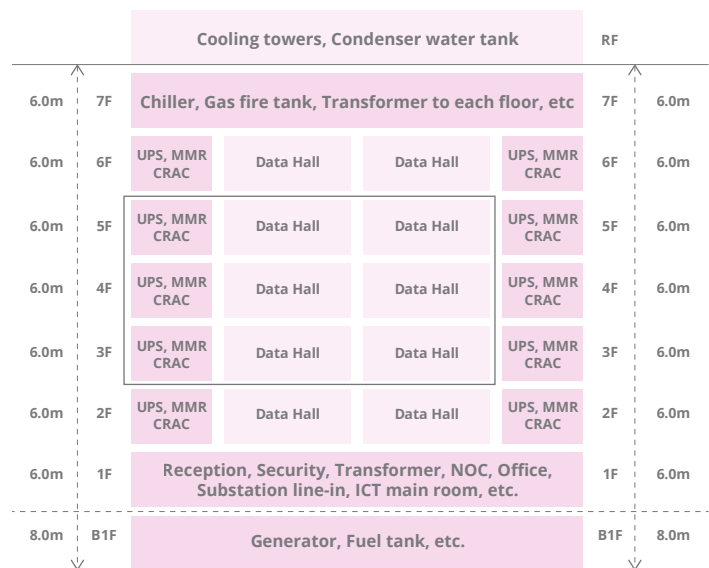

KEY FEATURES

- Designed for a capacity of 19.2MW, with options to expand up to 40MW
- Spanning from B1F to 7F, the facility is built on a 6,056 sqm land, boasting a total construction area of 2,460 sqm
- Offers a range of services including colocation, local and international connectivity, and managed services

PROJECT HIGHLIGHTS

- Prime Data Centre Location**
 - Close proximity to the central business district
 - Located in a disaster-free region
 - Access to major telco networks, with nearby submarine Cable Landing Stations (CLS)
- Redundant 2N Power Infrastructure**
 - Utilises separate power sources from different substations
 - Preferential power rates for businesses operating within the High-tech Park
- Scalability up to 40MW**
 - Designed for 20MW capacity with an additional 20MW reserved site
 - Site extension plans are in place to support your business growth
- Neutral Network Connectivity**
 - Close proximity to 3 network nodes and 3 CLS
 - Provides easy access to local and international networks
- Multi-Tier Data Centre**
 - Achieves uptime Tier 3 certification
 - Tier 4 compliance available on-request
- Exceptional PUE of 1.3X**
 - Maximises energy efficiency through KT's operational excellence
