

Epsilon

Connectivity Made Simple

Overview

Epsilon is a global connectivity provider that makes connecting applications and data to the cloud and around the world simple through our Network-as-a-Service (NaaS) platform, Infiny.

Epsilon simplifies this increasingly dynamic and complex networking ecosystem by enabling access to on-demand connectivity. From interconnection of data centres to clouds and internet exchanges, we deliver an array of connectivity solutions deployed across our global private network.

All Epsilon services are powered by a carrier-grade, hyper-scalable global backbone that connects the world's communications and technology hubs. Epsilon is headquartered in Singapore with offices in London, New York, Dubai and Sofia.

Solutions

Data Centre Interconnect

Interconnection between the world's largest network aggregating data centre locations

Cloud Connect

Infrastructure and network orchestration to connect to one or multiple cloud providers

Remote Peering

Private remote access to content and peering exchange points

Access

Dedicated internet and ethernet last mile network extensions to branch locations

Colocation

Highly secure and interconnected colocation facilities to deploy, host and connect

Voice

Suite of Enterprise voice services including SIP trunks and inbound numbers

INFINY
BY EPSILON

Infiny by Epsilon is a Network as a Service (NaaS) platform that enables users to buy and manage their network services, delivering carrier-grade connectivity to over 260 data centres, leading cloud providers and internet exchanges around the world.

We make it simple for businesses to interconnect themselves or their customers globally with an on-demand network orchestration capability.

- On-Demand Connectivity
- Global Scalability
- A Self-Service Model
- Guaranteed End-to-End Performance
- API-Enabled

Why Choose Us?

Service Excellence

More than 15 years of experience serving the sector with a track record of delivering exceptional customer service experience

Global Ecosystem

Dense mesh of interconnected networks, data centres, cloud service providers and internet exchanges are part of our network fabric

Extensive Reach

Global coverage with 260+ Points of Presence with extensive reach to other global facilities

Secure Data

We protect your mission-critical data over our carrier-grade, next-generation global private network

Seamless Model

Flexible and agile networking model ready to serve a whole range of network-centric businesses

Infiny by Epsilon

Award-winning Network-as-a-Service platform with network analytics designed to support technology innovation

“We believe in making it simple for you to enter new markets and develop long-term sustainable revenue streams. When we work together, we remove the barriers to success and can deliver new and simple powerful solutions that support growth across the value chain.”
